PROFILE OF QUARTER

A m a l K A C E L

We welcome our new engineer, recently graduated from a Master's degree in Mechatronics and Energy, who is becoming more and more competent on different subjects (inspection, audit, qualification, ...)

TECHNICAL POINT : **DIGITALISATION**

In early February 2021, we launched a project that is currently being finalized:

CREATION AND IMPLEMENTATION OF A DIGITAL SUPPORT FOR INTRA AND INTER-COMPANY TRAINING.

At the end of this application, we supplied 12 pads to allow the future trainees to carry out the MCQs and assessments in a digital way.

We would like to thank Nathan, a student in Automatics and Industrial Computing at UTT, who helped us during 6 months to realize this project, and to digitalize our training processes to allow us to gain in efficiency.

Moreover, we are designing exercises on pad, which will be proposed to you during the training sessions, in order to teach you how to build the various documents essential to the good progress of your nuclear orders.

UPCOMING ACTIONS :

- Creation and implementation of our own Learn Management System platform
- ICA auditor training for ISO 19443 certification audits
- Hiring of a student "Expert in Computer System" from ESIMED in alternation
- New e-learning modules...Création et mise en place de notre propre plateforme Learn Management System.

NEWS
